

Why MDM?

You should have control of all the mobile devices entering your organisation, whether they are company devices or part of a BYOD programme. MDM (Mobile Device Management) is a solution that gives you high-level control and security.

We partner with Miradore, the Finnish Software Company specializing in providing cloud solutions, to offer a free and enterprise plan to our customers to ensure their business mobiles are secure.

FREE

The easiest way to use MDM solution for securing your mobiles.

- ✓ Custom Reports
- ✓ Premium Support
- ✓ Application Management
- ✓ File Deployment
- ✓ Business Policies
- ✓ API

£1.50 / month

The Enterprise plan is the ultimate solution for efficient management of your mobiles, giving you the ability to secure your business devices, control data usage, separate business and personal content and automate and save costs.

Below are a few benefits of choosing the Enterprise plan:

- **Amazing additions for admins**
The free plan means you'll be sharing the same login for everyone. While the enterprise version offers different privileges and login's based on staff positions and responsibilities, giving you a trail to know who did what. For example, Tanya in HR could be assigned to keep an eye on her team's mobile devices while preventing access to devices outside her team. Similarly, Kamil, new to Tech support, can have full visibility of the entire solution while he shadows his colleagues without the risk of him changing critical configurations or system settings.
- **Locate and manage lost or stolen devices**
The Enterprise plan gives you added security and a back-up plan if a device in your fleet is lost or stolen. With the ability to remotely locate and wipe a device, you can ensure your company data is protected when a corporate device is missing.
- **Apps managed as if by magic**
While the free plan offers inventory data to show which apps have been installed to your devices, the Enterprise Plan really takes things to the next level. You can remotely black and white list apps, as well as push out and uninstall unwanted App store and Google Play store apps, and your company's own in-house apps.
- **Business policies**
Another Enterprise plan feature is the business policy enforcement. With different policies attached to different tags and the possibility to tag devices before they're enrolled, the right policies can be pushed to devices automatically, the very moment enrolment is complete. Designed to save admin a lot of time in comparison to the free subscription where policies have to be pushed out manually.
